**BEFORE THE BOARD OF PATENT APPEALS
AND INTERFERENCES**

Paper No. 19

Application Number: 09/503,508

Filing Date: February 14, 2000

Appellant(s): HANSEN ET AL.

Diana DiBerardino
For Appellant

MAILED
SEP 10 2002
Technology Center 2100

EXAMINER'S ANSWER

This is in response to the appeal brief filed June 10, 2002.

(1) *Real Party in Interest*

A statement identifying the real party in interest is contained in the brief.

(2) *Related Appeals and Interferences*

A statement identifying the related appeals and interferences which will directly affect or be directly affected by or have a bearing on the decision in the pending appeal is contained in the brief.

(3) *Status of Claims*

The statement of the status of the claims contained in the brief is correct.

(4) *Status of Amendments After Final*

The appellant's statement of the status of amendments after final rejection contained in the brief is correct.

(5) *Summary of Invention*

The summary of invention contained in the brief is correct.

(6) *Issues*

The appellant's statement of the issues in the brief is correct.

(7) Grouping of Claims

Appellant's brief includes a statement that claims 1-15 do not stand or fall together and provides reasons as set forth in 37 CFR 1.192(c)(7) and (c)(8).

(8) ClaimsAppealed

The copy of the appealed claims contained in the Appendix to the brief is correct.

(9) Prior Art of Record

5,251,148 HAINES, et al. 10-1993

(10) Grounds of Rejection

The following ground(s) of rejection are applicable to the appealed claims:

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Haines, et al. (USPN 5,251,148).

Haines, et al. (hereinafter referred to as "Haines") teach of an integrated process control valve capable of controlling the flow of fluid through the valve. The valve includes an actuator responsive to control signals for moving the throttling element or valve.

Haines teaches the control of the flow rate of a fluid by the position of the valve as claimed in instant claims 1, 2 and 4 in column 2 at lines 36-51. The disclosure states that pressure sensors are disposed at the inlet and outlet of the valve body for producing values representing the pressure of the fluid at the respective locations. A utilization device receives these measurements and develops signals to adjust or control movement of the throttling element or valve accordingly, in response to the estimated and/or calculated values.

As per the limitations for the calculating steps, instant claims 3, 5-7, 9-11, and 13-15, the claims of the patented invention disclose the features of the instant claims by expressing the variables for calculating the parameters, i.e. pressure and temperature, of the control method as claimed. See patented claims 1-10 in columns 8-10.

For the reasons stated above, the limitations of the claimed invention is taught by the prior arts of record; thereby, rendering the instant claims unpatentable.

(11) Response to Argument

Applicant argues that the reference of prior art to Haines, et al. does not describe or suggest the determination of a target valve stem position based on the target flow rate. Examiner refers to column 7, line 58 to column 8, line 2, wherein Haines teaches the setting of a flow rate, determining the valve position to achieve the desired flow rate and the adjusting of the valve as necessary to reach the desired results.

As for the Applicant's comments regarding the determination of a pressure coefficient and calculation of the flow area, Haines teaches these steps in Figure 5.

Art Unit: 2125

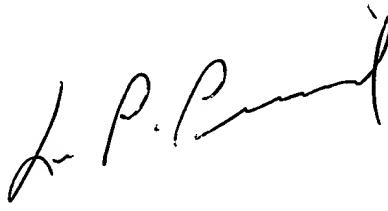

The controller, as depicted by the flowchart of Figure 5, is used for calculating the flow rate. See column 7, lines 12, et seq.

The prior art of reference to Haines, et al. teaches and/or clearly suggests the limitations of the instant invention. It is for this and the aforementioned reasons that instant claims 1-15 are not patentably distinct from the prior arts of record.

For the above reasons, it is believed that the rejections should be sustained.

Respectfully submitted,

Sheela S. Rao
